**DETAILED ACTION**

***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-13, drawn to a computer-implemented method of preparing a biological sample optimizing material usage and plate layout, classified in class 435, subclass 7.1.
- II. Claims 14-22, drawn to a computer-implemented method of preparing a biological sample for a binding assay by executing work instructions on robot stations, classified in class 435, subclass 7.1.
- III. Claims 23-25, drawn to a computer-implemented method of preparing a biological sample using an experiment design manager, classified in class 435, subclass 7.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II, and III are directed to related process of preparing a biological sample for a binding assay. The related inventions are distinct if the inventions as claimed do not overlap in scope, i.e., are mutually exclusive; the inventions as claimed are not obvious variants; and the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect.

See MPEP § 806.05(j). Group I has steps for optimizing material usage and plate layouts and receiving UV spectrophotometer data for a partially prepare sample, which determines which calculation to use and uses a LIMS to perform the calculations.

Group II has steps that involve executing instructions for generating assay on robot

stations and notifying an operator of insufficient materials during an inventory process. Group III uses an experiment design manager that communicates with multiple robot stations for preparing a biological sample. In the instant case, because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined though the requirement be traversed (37 CFR 1.143).
